## Medicinal Fluid Extracts.

The following list comprises all the Officinal and other Standard Fluid Extracts, including also many new remedies recently brought before the medical profession in the various medical journals.

We are confident that a trial of our Extracts will convince our patrons of their perfect reliability, the utmost care being observed in selecting drugs of the best quality, and every detail of their manufacture being conducted with skill and care by the most approved methods, so as to secure a thorough representation of all medicinal properties of the respective drugs in an unchanged condition.

**All orders are filled in Pint Bottles unless otherwise specified.**  
*A deduction of 6 cts. per pint is made when ordered in bulk (five-pint bottles). An advance of 12 cts. " " " " in one-half pint bottles.*

# Powdered Extracts.

These powdered Extracts are fully equal in strength to the pilular Extracts, and are prepared by drying the latter at a low temperature and compensating for the loss of weight, caused by the evaporation of moisture, with the respective powdered drugs and in some instances with powdered Sugar of Milk, thus bringing the powdered Extract again up to the original weight of the pilular Extract.

As these powdered Extracts readily absorb moisture, they should invariably be kept securely corked.

# ABSTRACTA.

## ABSTRACTS, U. S. P.

These are a new class of preparations introduced into the U. S. Pharmacopœia of 1880, and are in fact powdered Extracts, representing in all cases two parts of the respective drug in one part of the abstract.

Being uniformly just double the strength of the powdered drug and the fluid extract, and being in the form of a permanent powder conveniently dispensed, they will no doubt prove a desirable addition to the list of officinal preparations.

The following comprises a list of the officinal abstracts only, but we can furnish those of other drugs, prepared in the same manner and proportion, when wanted.

As the abstracts are liable to absorb moisture, they should be kept in well-corked bottles in a cool place.

We would advise to order them in ounce bottles only unless they are intended for immediate use.

# Resinoids—Concentrations.

The following comprises a list of the proximate medicinal principles commonly known as Resinoids or Concentrations. Whilst some of these represent a pure resin and others an impure alkaloid, by far the greater number are a combination of the various active proximate principles contained in the drug which they represent.

 Owing to the liability of these preparations to absorb moisture, they should be kept securely closed and in a cool place.

Put up in ounce vials and bulk.

# SUGAR-COATED PILLS AND GRANULES.

 For Pills of Quinine and Cinchonidine see Special List.

These Pills are prepared with the utmost care, under our immediate supervision. The drugs entering into their composition are of the best quality, the quantities and proportions invariably as represented on our labels, and the excipients used to make the masses are carefully chosen in each case to make the pill permanently soluble. The sugar-coating and gelatine coating is perfectly soluble, and for uniformity of shape and beauty of finish our Pills are not excelled by any other.

**Gelatine Coated Pills can be furnished either round or oval shaped.**

**Sugar Coated Pills are furnished round only.**

Special Recipes for Sugar Coated Pills are made and coated to order when not less than 3,000 Pills are ordered at one time. Gelatine Coated Pills can be prepared in lots of 1,000 or more.

 In ordering please specify whether Gelatine Coated (G. C.) or Sugar Coated (S. C.), and whether in bottles of 100 or 500 each.

# Soluble Hypodermic Tablets.

These Hypodermic Tablets will be found perfectly and quickly soluble in cold or warm water. The tablet may be conveniently dissolved by placing it in the cylinder of the Hypodermic Syringe, adding the requisite quantity of water and shaking for a few seconds.

They combine accuracy of dose with perfect preservation of the active ingredient.

The base with which the latter is combined is perfectly harmless and unobjectionable.

**They will not become insoluble by age.**

**They will cause no abscesses.**

**They may also be administered by the mouth.**

We respectfully solicit a trial of these Tablets, samples of which will be furnished on application.

 Special formulas made to order.

# OLEATES.

Since the introduction of Oleate of Mercury to the Medical Profession, by Dr. John Marshall in 1872, the demand for other Oleates has rapidly increased. Oleates are much cleaner and more efficient and elegant preparations than ordinary ointments. Whilst the latter are merely mechanical mixtures of fat with Oxide of Mercury, or with whatever other remedial agent employed, and are wasteful and uncertain in their action, much of the insoluble remedy remaining on the surface of the skin after the fat has been absorbed—the Oleates, on the contrary, are CHEMICAL combinations of the Alkaloid or Metal with Oleic Acid, penetrating the skin more readily, and every molecule of the Oleate absorbed, carrying with it its definite proportion of the Alkaloid or other active ingredient used, effectually reaching even deep-seated parts.

The term *Normal Oleate* is applied in this List to the undiluted combinations.

The diluted Oleates (Ointments of Oleates) are made to represent the most desirable strengths.

## IN ORDERING OLEATES PLEASE SPECIFY DISTINCTLY.

### Including Containers.

	oz.	lb.
<b>ACONITINE</b> (Solution of Oleate), containing 2 per cent. of ordinary Alkaloid.....	75	10 00
<b>ACONITINE</b> (Solution of Oleate), containing 2 per cent. Duquesnel's Aconitine .....	4 50	

We desire to draw particular attention to the above two Oleates of Aconitine. The former is made from the Aconitine of the common market, whilst the latter is prepared from Duquesnel's Aconitine. The latter is about fourteen times stronger than the former, which accounts for the difference in price. This Oleate should be used with the greatest precaution and to a very limited extent. It should be carefully applied with the end of the cork.

## Tablet Triturates.

**PREPARED ACCORDING TO DR. ROBT. M. FULLER'S METHOD.**

(See *Medical Record*, March 9, 1878.)

"An easy, economical and accurate method of dispensing medicines in a compact and palatable form."

These tablets consist of the respective medicinal ingredient and pure Sugar of Milk, thoroughly mixed and incorporated together by trituration.

Only the purest materials are used in their manufacture.

The apparent advantages of this mode of dispensing medicines are:

The thoroughness of the subdivision of the medicinal ingredient attained by protracted trituration with pure Sugar of Milk, and the consequent accuracy of dose.

The ready solubility or diffusibility of the tablets in water and in the fluids of the stomach.

The elegance of this form of tablet and the convenience afforded for readily and accurately dispensing small doses of potent remedies.

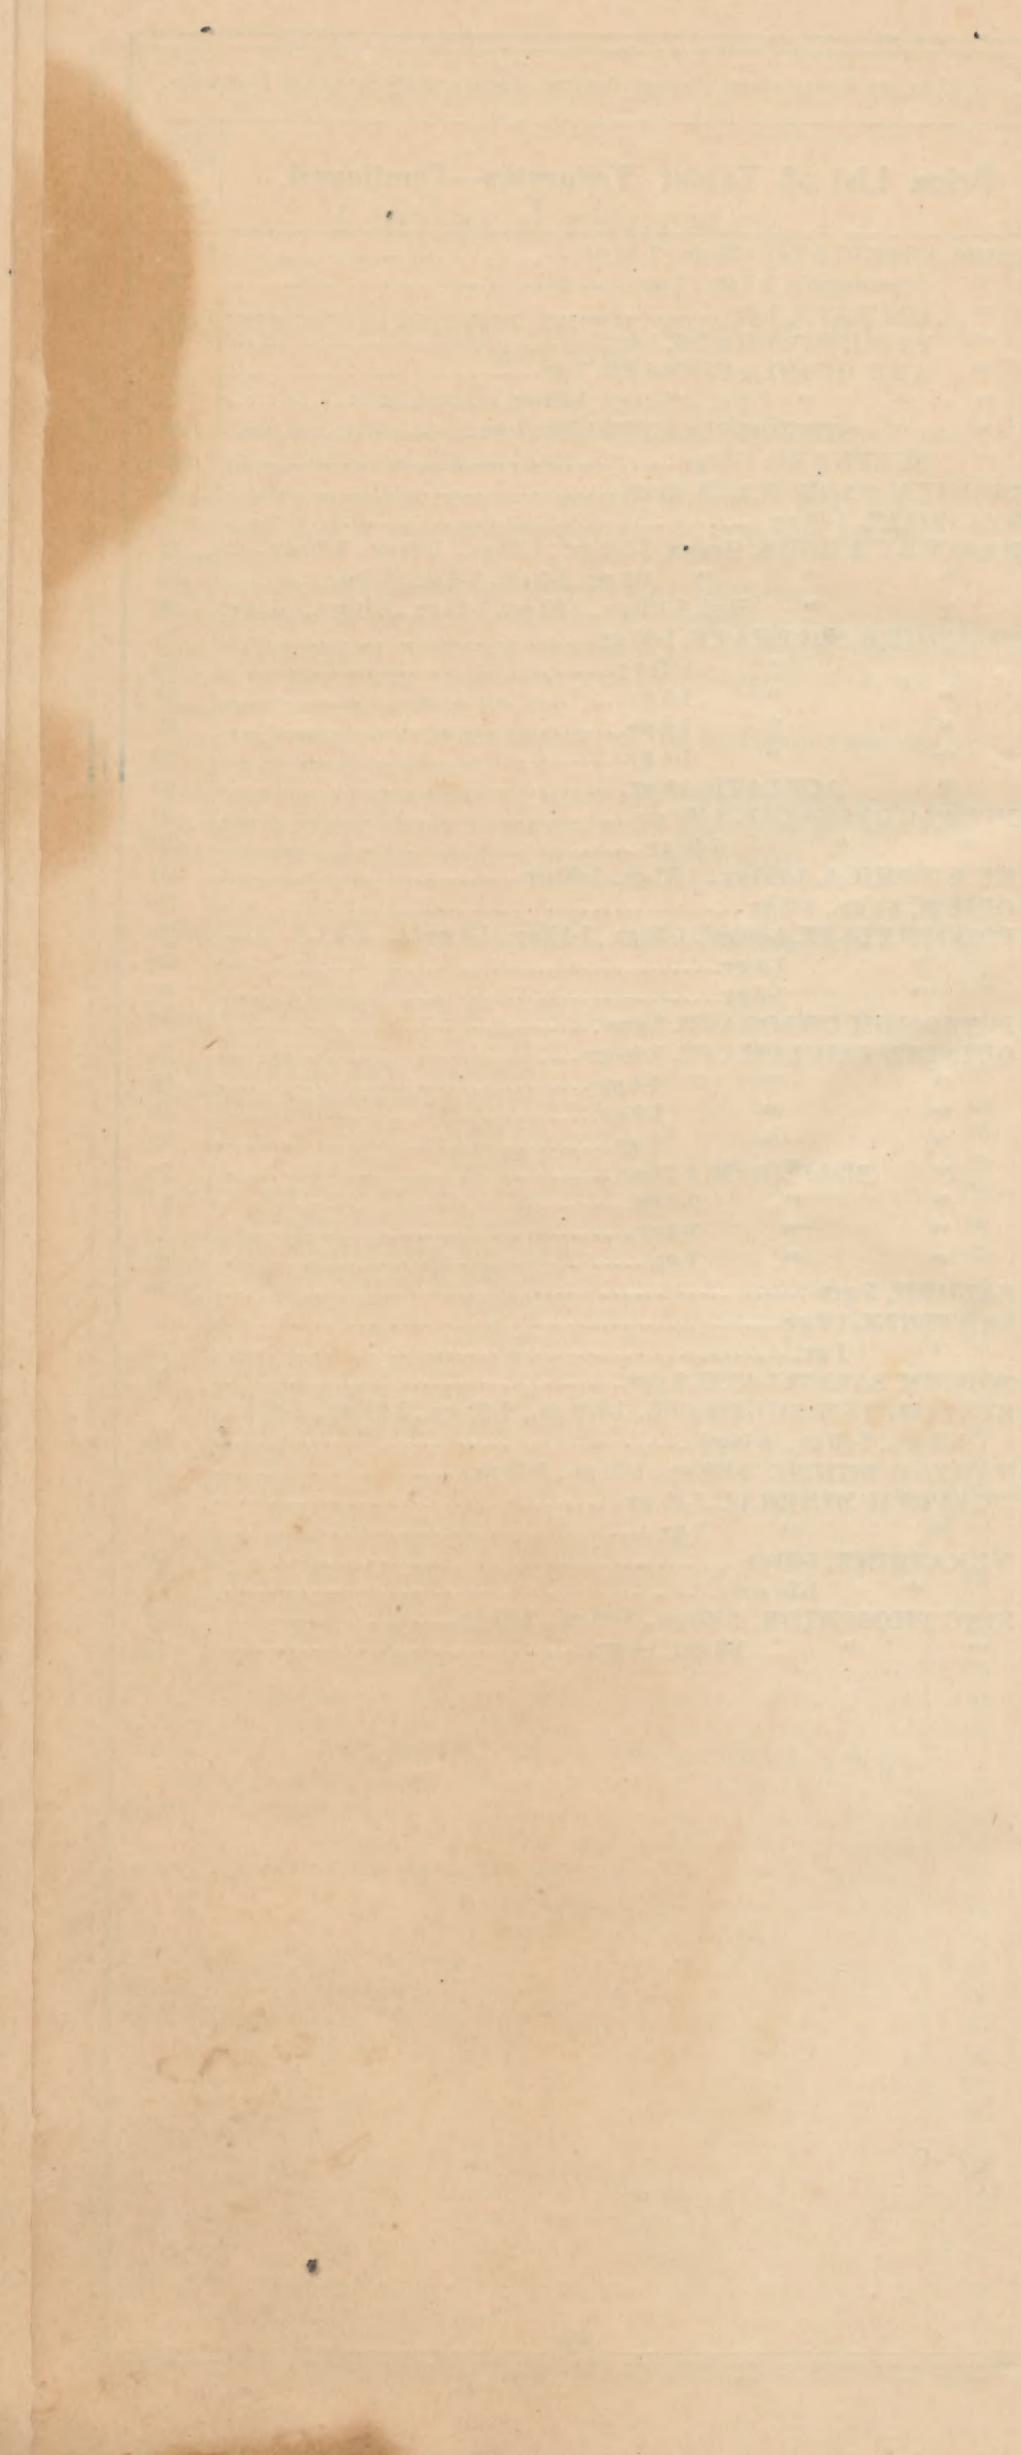

Special formulas made to order in lots of 1000 or more.
